

## **Influenza Vaccine Dosing Algorithm for Children 6 Months through 8 Years of Age, 2011-12**

---

The figure above shows an influenza vaccine dosing algorithm for children aged 6 months through 8 years. If the child did not receive 1 or more doses of the 2010-11 seasonal influenza vaccine or if the provider is not sure, 2 doses of 2011-12 seasonal influenza vaccine should be administered a minimum of 4 weeks apart. If the child did receive 1 or more doses of the 2010-11 seasonal influenza vaccine, 1 dose of 2011-12 seasonal influenza vaccine should be administered.
